

DESCRIPTION

- Table of contents :
 - 2 external breastprosthesis
 - 1 syringe of 50 ml
- External breastprosthesis which can be filled with water by the patient.
- Supplied with a 50 ml syringe.
- Wearable in a bra for several weeks.

INDICATIONS

- All breastaugmentations.
- Asymmetry corrections.

ADVANTAGES

- Patient **chooses** her(his) own future breastsize.
- The patient will be able to **visualize** what she(he) will get and she(he) will be able to check the reactions of her environment (friends,colleages...) before surgery which will help in the decision making.
- The decision can be taken after a few **weeks "try out"** instead of after a few minutes.
- **Easy** to measure the volume with the enclosed syringe.
- The patient will be less afraid before surgery because she(he) will already have an idea about **what to expect**.
- Easier for the **surgeon** because the patient takes the decision about the size.

HOW AND WHERE TO ORDER

If you want to order **B-Sizer**:

- Ask your plastic surgeon
